

"Grid" – Charting

This guide will provide step by step instructions on how to set up multiple charts using the charting tool. Once a data grid is developed, various charts can be created to offer a graphical representation of the data. There are countless metrics which can be charted to provide a range of representation such as inspections, observations, safes per inspection and severity types to name a few.

Chart types include the area, column, bar, line, pie, doughnut and radar charts. These charts present themselves in various brilliant colors.

Adding a Chart

Click Chart Icon

This will open a dialogue box to create a chart.

🚹 Create Chart from Grid			
Title :			
Series (horizontal axis) :	Auditor B		
Values (vertical axis) :	Inspections v		
Aggregate Function :	Total V C		
Type :	Area 🗸 D		
	Save		

Α

Title – A best practice would be to give your graph a title so anyone could understand what the chart represents
